The build is intended to be used by OEMs, Windows 8-only resellers, and other authorised Microsoft partners to develop and test Windows 8 products. Windows 8 build 9200 is the first release of Windows 8 that is fully compatible with Windows 7, Windows Vista, and Windows XP; previous build numbers did not support these operating systems. However, since the release of Windows 8 build 9600, its Surface edition can only run Windows 8.1. Windows 8.1 requires Windows 8 build 9600 or later to boot or start. Thus, if a Surface Pro 1, for example, has a new motherboard, it is not possible to upgrade to Windows 8.1 without exchanging the motherboard. Microsoft stated on 25 June 2014 that Windows 8 build 9600 and higher will be the final release for Windows 8. Windows 8 build 9600 and higher will require a Windows 8.1 installation media in order to upgrade to Windows 8.1. Release history The last public build of Windows 8, build 9200, was released on 22 August 2012, while the first public build of the Surface Edition, build 9600, was released on 11 September 2012. The first build of the Enterprise version, build 10000, was released on 30 October 2012. Reception Windows 8 received generally positive reviews and reception. Most reviewers praised Windows 8 for its new touch-centric interface, new features, and performance improvements. The new interface received favorable reviews, though some reviewers criticised its new elements, particularly for their inconsistent implementation, and some reviewers noted that they needed more time to get used to the new interface. The new file system NTFS received mixed reviews, with some reviewers noting that it had greater reliability and performance improvements than its predecessor FAT32, while other reviewers noted that it was a less reliable filesystem compared to FAT32 and no improvement in performance compared to NTFS. Due to its new interface, Windows 8 was criticised for lacking major applications that were common in previous Windows operating systems. Some reviewers noted that they were unsure if Windows 8 would have these applications once it was released to manufacturing in August 2012. John C. Abell noted that users could not search the Windows Store for applications and had to search manually. The Internet Explorer 10 Web browser received mixed reviews, with some reviewers noting that it was lighter than Internet Explorer 9 and featured a more streamlined user interface. Windows 8 is seen as a turning point for Microsoft's operating systems, with reviewers noting that it not only changed the appearance 82157476af
